
(a) Paired allocation and evaluation
Target cohort
Fixed risks
and outcomes
300 paired
permutations
Nested budgets
Calibration U
First m patients
Evaluation V
Remaining or
common suffix
Fixed comparison: four strategies
None / ordinary / κ=5 / intercept + slope
Paired IPCW Brier scores
Mean Δ and fraction Δ > 0
Same allocations across predictors and methods
(b) Exploratory selection within U: none, κ=5, ordinary
Bootstrap stage 1
100 replicates
Store OOB losses
Pooled OOB
patient–replicate
records
Bootstrap stage 2
1,000 paired
record resamples
Distributions
of paired Brier
score differences
Minimum error
or preference
Select and refit
